Key findings — EU industrial heat battery / HP potential (post–HP CAPEX)

01 — FLEET

522 TWh/y

Replaceable fossil process heat across 2,192 EU sites with solar profiles (2(

02 — 5 KM SCREEN

40%

Of fleet heat meets ≥90% availability with colocated land within 5 km (88%

03 — LAND UNLOCK

22% to 65%

Of high-temperature heat (≥200 °C) clears 90% when land expands 5→15

04 — COST (2030)

$72/MWh

Heat-weighted LCOH among sites meeting 90% at 5 km (median $58/MWh); country gas-boiler benchmark ~$84/MWh; ~71% of met-90 heat is below the country gas benchmark (~28% of fleet heat).

emery); reliability 59%).

(~23% of fleet heat).
